

Measurement Sheet

To accurately measure your feet, in addition to this insert, you'll need to tear off the paper tape measure attached and grab a pencil.

You cannot measure your foot accurately without the help of another person. So go grab someone, anyone. This won't take long! Follow the instructions below.

STEP 1 Get Your Foot Length

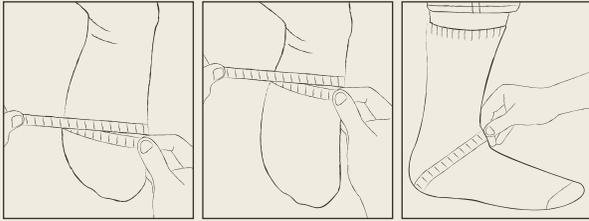

Wearing your boot socks, stand on this sheet of paper, distributing your weight evenly on both feet.

Have your helper trace carefully around your foot, creating a single, clean outline. Be sure to hold the pencil straight up and down to avoid inaccurate measurements.

Using the paper tape measure provided, measure the length of the tracing in inches from heel to toe.

STEP 2 Get Your Foot Width

Measure the circumference of your foot at the heel, instep and ball with the paper tape measure provided, as shown in the diagram. For each measurement, pull the tape tight and then release it slightly so that it is snug, but not constricting. **We recommend taking your width measurements in a seated position, one leg crossed over the other.**

The Ball
Measurement should be taken from the top of your big toe joint diagonally backward over the top of the pinky toe joint.

The Instep
Measurements should be taken at the highest part of your arch and instep.

The Heel
Measurements should be taken from the base of your heel, wrapped snug around the foot just behind the instep.

STEP 3 Get Your Leg Width

Measure around your leg at 6", 8", 10", 12", 14" and 16" intervals from heel to desired boot height. Example: if you want a 10" height boot, send us your 6", 8" and 10" measurements.

STEP 4 Boot Size + Width

Indicate your normal boot/shoe size and width.

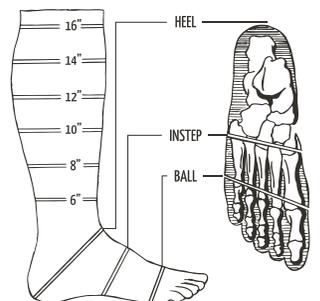

Size _____ Width _____

Boots are not built to exact measurements. Measurements are used to get customer to their closest White's Boots size.

Trace Right Foot Here

RIGHT FOOT MEASUREMENTS

Length _____ @ 16" _____
 @ 14" _____
 Ball _____ @ 12" _____
 Instep _____ @ 10" _____
 Heel _____ @ 8" _____
 @ 6" _____

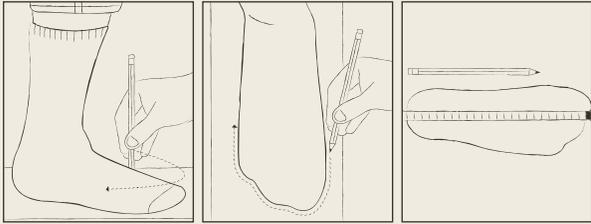

Measurements must be in inches and to the closest 1/8"
